

Sulfur Block System

Get the clean, refreshing water you deserve with the Watershield Sulfur Block System. Innovative in design, the Watershield Sulfur Block System provides a simple, effective solution requiring no chemicals or salt for regeneration. The blend of medias used effectively remove sulfur, hydrogen sulfide gas, heavy metals, bacteria growth, and other taste affecting contaminants.

The Watershield Sulfur Block System is a single tank solution, taking up much less space than the unsightly contact tank and aerator tank solutions. Also, being a closed system, it does not have the unsanitary and algae growth problems that come with open air aerators.

For a total soft conditioned water solution, team up the Watershield Sulfur Block System and a Watershield water conditioning system and get great, soft, and odor free water today.

- **Use less electricity**
- **No harsh chemicals**
- **No extra pressure tanks**
- **No unsightly tanks**
- **No unsanitary aerators**

Removes that “rotten egg” odor in a single solution
